CMPSC 100

Computational Expression

A couple things for your attention

- Take note of the line:

```
inputValue = totalCents = (int)(Double.parseDouble(args[0]) * 100);
```

- Hint: the inputValue also makes *totalCents* (pun intended)

- How do we get the original value back?
- Hint: it involves dividing an integer by a double (is that even possible!?)
