Computational Expression

You're already playing a game, but I'm not going to
tell you the rules.

Compute it out, wizardfolk.

Now that you're at the right table, discuss one question that you have about either reading, making sure to identify which you're referring to.

Computational thinking

- Idea advanced by Jeanette Wing (Carnegie Mellon) in the mid-2000s; has ancestors earlier (~1980)
- Is made up of several ideas, but I settle on two:
 - Decomposition—breaking a problem apart
 - Abstraction—generalizing the “rules” governing a problem
- How did you employ this kind of thinking to solve the game we played at the beginning of class?
 - How did you “decompose” it?
 - How/what did you “abstract?”
- Fun fact: all of the table names are Ubuntu Unix builds.

Computational thinking

“ Stating the difficulty of a problem accounts for the underlying power of the machine—the computing device that will run the solution

JEANETTE WING, “COMPUTATIONAL THINKING”

Computational thinking: the Bit Ladder

0 0 0

— — —

— — —

— — —

— — —

— — —

— — —

1 0 0

- Solve in 7 steps or fewer:
 - Transform the binary “word” “000” >> “100”
 - Changing only 1 bit at a time
 - You may only use a 1 or 0 in any position (no fancy “bases” other than 2)

Computational thinking: the Bit Ladder

<u>0</u>	<u>0</u>	<u>0</u>
<u>0</u>	<u>0</u>	<u>1</u>
<u>0</u>	<u>1</u>	<u>1</u>
<u>0</u>	<u>1</u>	<u>0</u>
<u>1</u>	<u>1</u>	<u>0</u>
<u>1</u>	<u>1</u>	<u>1</u>
<u>1</u>	<u>0</u>	<u>1</u>
<u>1</u>	<u>0</u>	<u>0</u>

- Solve in 7 steps or fewer:
 - Transform the binary “word” “000” >> “100”

IT'S SO FAST, YOU'LL FLY THROUGH YOUR WORK.

Introducing the NCR PC6.

Whoosh!

That's information coming up on the new NCR PC6.

The PC6 is NCR's most powerful personal computer yet. It's powered by the advanced Intel 8088-2 microprocessor. So you can process information nearly twice as fast as the PC XT™.

At that rate, you can load programs faster. Recall files in an instant. Calculate in a flash. And get home earlier.

The PC6 stores a lot, too—

up to 40MB of hard disk space, or about 7,575 single-spaced typewritten pages.

Of course the PC6 is compatible—running over 10,000 business software programs. In fact, a special switch lets you operate at either 8 MHz or 4.77 MHz, allowing you to run software that some other high performance PCs, like the PC AT™, can't run.

And, just in case, you can get a built-in streaming tape back-up system to guard against accidental erasures,

disk damage, or coffee spills.

The NCR PC6. To see it, fly on down to your NCR dealer today. For your nearest NCR dealer, call toll free 1-800-544-3333.*

A better personal computer.

It's exactly what you'd expect from NCR.

* In Nebraska call 1-800-343-4300.

150 Extra Engineers

An IBM Electronic Calculator speeds through thousands of intricate computations so quickly that on many complex problems it's like having 150 EXTRA Engineers.

No longer must valuable engineering personnel . . . now in critical shortage . . . spend priceless creative time at routine repetitive figuring.

Thousands of IBM Electronic Business Machines . . . vital to our nation's defense . . . are at work for science, industry, and the armed forces, in laboratories, factories, and offices, helping to meet urgent demands for greater production.

IBM INTERNATIONAL BUSINESS MACHINES

Radio Shack's \$399 TRS-80 Color Computer-- Innovation at it's Very Best!

The Family Christmas Gift That's Functional, Fun and Educational! Tremendous versatility and value at a breakthrough price. Something for everyone in your home! The TRS-80 Color Computer can be used with our plug-in ROM Paks, or write your own programs in BASIC. Mom and Dad can use it for any number of applications, such as keeping track of personal finances; youngsters can learn the basics of computer programming—the whole family will enjoy playing exciting color action games. It's expandable, so its capability grows with yours. Attaches to any color TV quickly and easily or get our optional TRS-80 Color Video Receiver (works as an extra TV too!).

Put a computer in your life this Christmas. Get the full story and specs from your nearest Radio Shack store, dealer or Computer Center. Over 6,000 locations, nationwide. Or write for a free TRS-80 catalog: Radio Shack, Dept. 81-A-62, 1300 One Tandy Center, Fort Worth, TX 76102.

*Retail prices may vary at individual stores and dealers.

What kind of man owns his own computer?

Rather revolutionary, the whole idea of owning your own computer? Not if you're a diplomat, printer, scientist, inventor... or a kite designer, too. Today there's Apple Computer. It's designed to be a *personal* computer. To uncomplicate your life. And make you more effective.

It's a wise man who owns an Apple.

If your time means money, Apple can help you make more of it. In an age of specialists, the most successful specialists stay away from uncreative drudgery. That's where Apple comes in.

Apple is a real computer, right to the core. So just like big computers, it manages data, crunches numbers, keeps records, processes your information and prints reports. You concentrate on what you do best. And let Apple do the rest. Apple makes that easy with three programming languages—including Pascal—that let you be your own software expert.

Apple, the computer worth not waiting for.

Time waiting for access to your company's big mainframe is time wasted. What you need in your department—

on your desk—is a computer that answers only to you... Apple Computer. It's less expensive than timesharing. More dependable than distributed processing.

Far more flexible than centralized EDP. And, at less than \$2500 (as shown), downright affordable.

Visit your local computer store.

You can join the personal computer revolution by visiting the Apple dealer in your neighborhood. We'll give you his name when you call our toll free number (800) 538-9696. In California,

(800) 662-9238.

Apple Computer, 10260
Bandley Drive,
Cupertino,

Current computers aren't that different

- The main computer hardware components are still:
 - CPU
 - Main Memory (RAM)
 - Secondary Memory (hard disk drive; solid state drive)
- The main computer software components are still:
 - The operating system
- Peripheral devices, though useful to us humans are, in most cases, for our convenience.

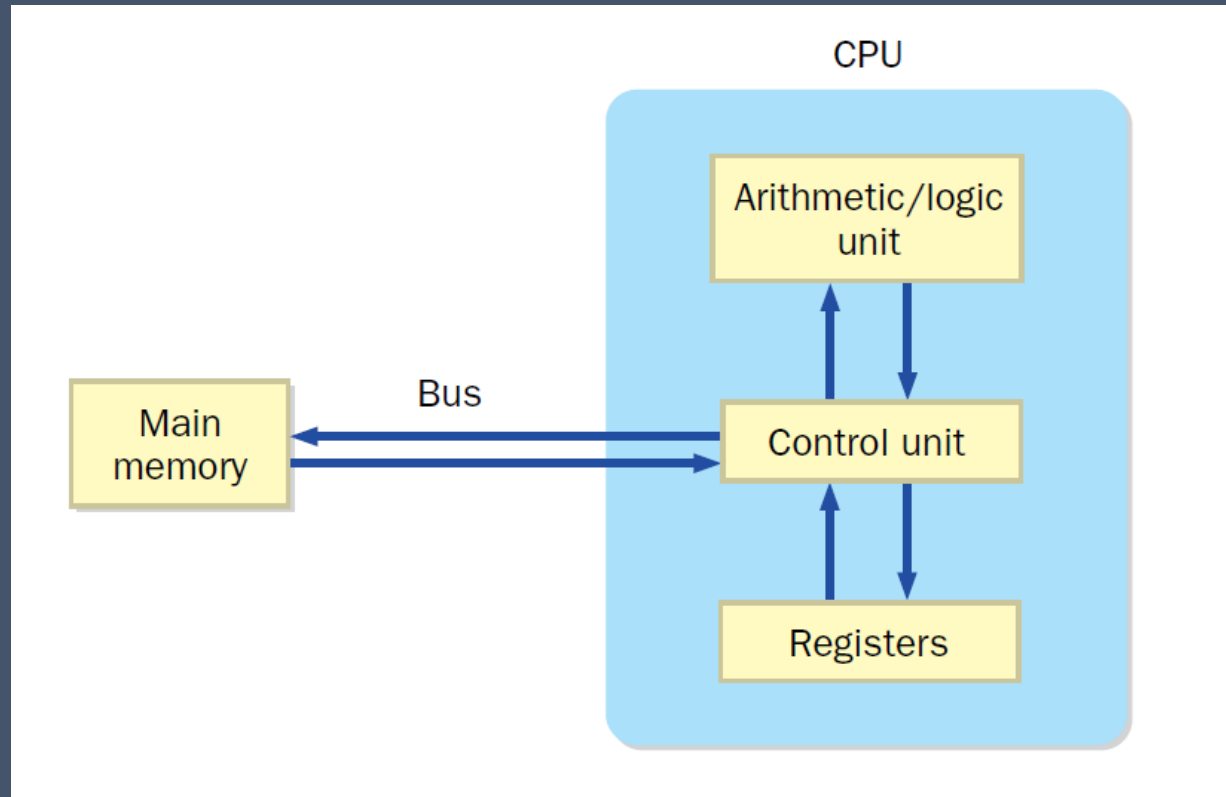

Current computers aren't that different

- Much like systems 60+ years ago, we still measure memory using:
 - Metric prefixes like kilo-,mega-,giga- (we've really only crept up the scale over time)
 - Base 2 (binary) number systems as basis for representing information
 - Digital vs. analog representation

But what does this have to do with us?

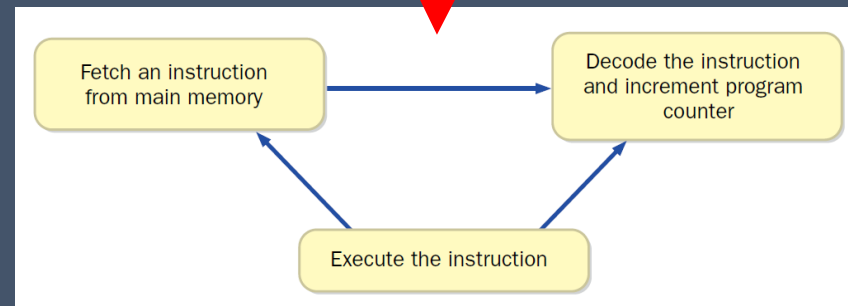

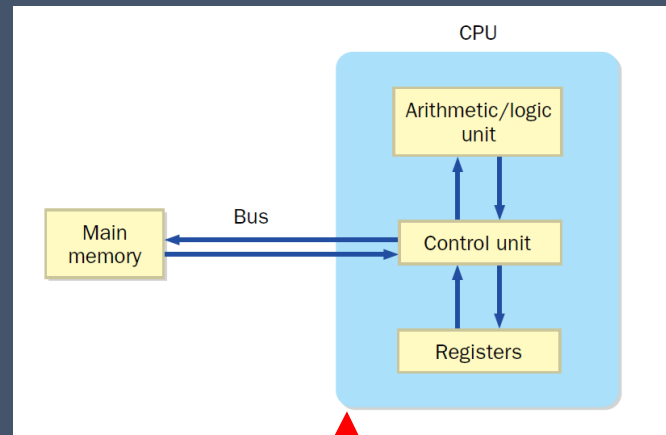

Current computers aren't that different

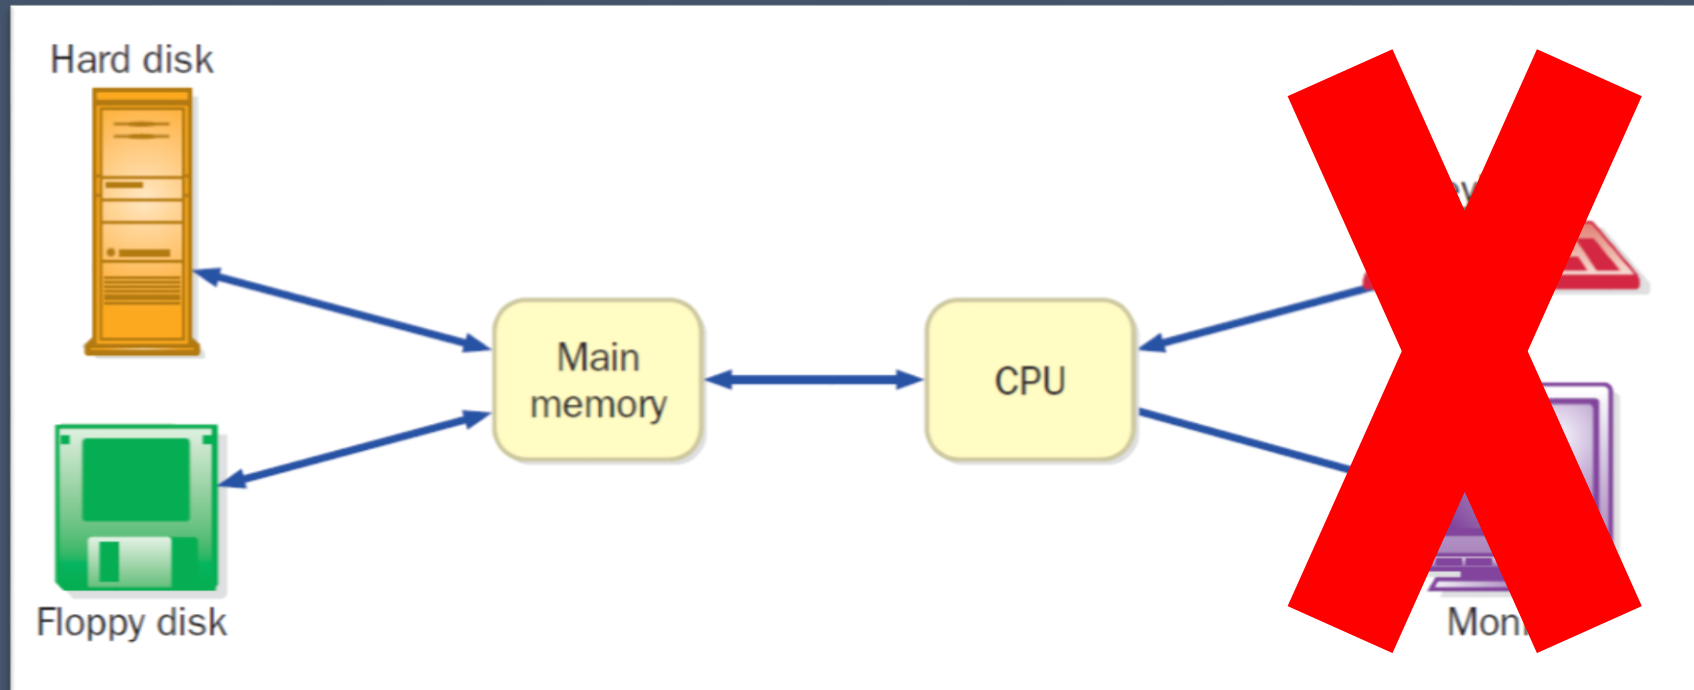

Current computers aren't that different

[illegible]

Current computers aren't that different

But what does this have to do with us?

But what does this have to do with us?

So what is a “container?”

“ A container is a standard unit of software that packages up code and all its dependencies so the application run quickly and reliably from one computing environment to another.

DOCKER WEBSITE

So what is a “container” really?

- In this course, take container to mean:

An operating system image:

- built from a Dockerfile that is
- based a “base” image stuffed with extra software so
- when run (“containerized”) dumps into main memory &
- ensures that everyone’s software runs the same way everywhere independent of personal system config.

Tangent: what is an “image?”

Unfortunately not this.

Tangent: what is an “image?”

- A snapshot of a computers “file systems” at a given point in time.
- You can have:
 - A Unix image
 - A Windows image
 - A Mac image
- We can even take snapshots of personal machines, and install them elsewhere!

So what is a “container” really?

Dockerfile > Image > Container

But, sometimes...

Base image > Dockerfile > Image > Container

I have 01100011 problems, “containers” are 01

“dumps into main
memory”: Or, a
Problem or Not?
