

# CMPSC 100

Computational Expression

## PRACTICAL SESSION 01

# Goal for today: prepare your workstation

## Objectives:

- To set up secure communication between your PC and the GitHub platform using a git client
- To prepare your PC for future assignments arriving from GitHub Classroom
- To install the "containerization" platform, Docker
- To run your first "container," proving that your install of Docker is functional
- To download and install Atom, a common text editor for software development
