CMPSC 100

Computational Expression

Goal for today: write and run some Java

- Today, you'll do the following:
  - Install java locally so that you can experiment with coding on your own
  - Write the "Hello, World" program in Java and observe how running and "compiling" it behaves
  - Develop and take note of your questions, as we're going to cover what happens today when we reconvene on Monday.
  - Also on Monday: some #realtalk about software difficulties and the rest of the semester
  - But, before we get too far into the practical, there's one rule:

THE CODE MUST BUILD
